## Message to our customers

Dear Ladies and Gentlemen,

The steadily rising number of COVID-19 diseases caused by the SARS-CoV-2 virus is increasingly dominating the worldwide news situation. The measures taken in many countries to contain the virus are not without impact on the availability of electronic components. For certain parts, we are seeing a doubling of the purchase price or delivery time, sometimes both.

Through far-sighted material supply we have an average of 50% of the required components in stock. In addition, we have long-term and resilient agreements with our suppliers. Nevertheless, we are dependent on a functioning supply chain to be able to manufacture and deliver your products on time. To prevent possible supply bottlenecks, we will bring forward orders or call-offs of component requirements known to us by 2 months.

We strongly recommend that you notify us of your product and component requirements earlier than usual and that you also bring forward your orders by 2 months. This will enable us to trigger the resulting component procurement with a comfortable lead time.

With this measure, you can significantly contribute to securing the supply chain in order to minimize the effects of SARS-CoV-2.

Internally, we have taken appropriate measures to protect our employees and will adapt these measures immediately in the event of any changes to the situation.

Best Regards  
PHYTEC Messtechnik GmbH
